Detailed Office Action

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 10-16, 20-25, drawn to detecting semiconductor defect and transporting the semiconductor between processing stations, classified in class 356, subclass 237.5.
- II. Claims 4-7, 17-19, drawn to adjusting the operation of the semiconductor fabrication line, classified in class 324, subclass 758.
- III. Claims 8-9, drawn to statistically recording defects, classified in class 356, subclass 237.5.

The inventions are distinct, each from the other because of the following reasons: Inventions group I and group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group I and II has separate utility such as detecting defect in a semiconductor device; and adjusting semiconductor processing station to correct defects on semiconductor devices. See MPEP § 806.05(d).

Inventions group I and III, and group II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination of group I and II as claimed does not require the particulars of the subcombination as claimed because detecting defect condition of a semiconductors of group I and II does not require a particular method of observing the distribution of the defects and performing the detection in real time of group III. The subcombination has separate utility such as recording defects statistically.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Malvin Kraus on 04/05/2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
